WIFI AC POWER SPY CAMERA ADAPTER WITH NIGHT VISION

Model Number – WF-AC-IR

Short Description

Wow! 240V Australian AC charger power adapter with built in WiFi, pinhole spy camera, motion activated HD video & audio recorder including **No Glow IR night vision**. That means this spy camera can see and record even in total darkness.

That's right, plug this amazing hidden security camera into any Australian power point (international connections included) download the Iphone or Android App and if WiFi is enabled at the camera location, view the camera live and playback recordings from anywhere in the world. This *AC WiFi Power Adapter IR Hidden Camera* is packed full of features including a concealed internal micro SD card motion detection recording up to 128GB. We stock a huge range of [WiFi Spy Cameras](#) & [DVR Hidden Cameras](#).

Description

Simply put, this amazing *WiFi Hidden Camera* is easy to use and absolutely packed full of features and functions. All in one HD pinole security camera & microphone is unique, discreet and can be mounted anywhere even upside down if you choose. Other functions include motion detection recording, constant recording, optional cloud recording plus *invisible IR night vision*. The functional USB interface can be used to power or charge many other devices including mobile phones etc.

The basic difference between our *Night Vision WiFi AC Adapter Spy Camera* and our non IR version [WiFi AC Adapter Hidden Camera](#) is a slight price difference and a slightly larger Night Vision camera size. There is not much difference is casing size however the link will show the non IR version is perhaps more slimline but otherwise identical.

Are we ticking all the boxes so far? Don't go away there is more. If power happens to be available, great plug it into power then the camera can be left on as long as you like. Whenever anyone moves within 5M of the camera (day or night) it will record to the optional concealed internal micro SD card memory or to a Cloud server. You select the recording quality anywhere from 720P to 1080P.

Constant or motion detection recording can be selected or if preferred with motion push alerts. The App allows users to select recording duration and so much more.

1080P HD WiFi AC Adapter Hidden Camera with No Glow IR Night Vision looks like an ordinary phone charger, and it is, however concealed within is a high resolution colour pinhole camera with audio allowing for live HD video streaming directly to your iPhone or Android smartphone. Phone charging devices are common, so this *hidden security camera* won't look out of place anywhere. Who takes any notice of a phone charger anyway?

Setting up live streaming is easy and takes just a few minutes. Download our free iPhone or Android App and follow the instructions. Simply wait a few minutes for your phone to locate the device UID, select the UID number in WiFi phone settings, select your WiFi network router and WiFi password to be live viewing the camera. Once you see the *spy camera* live, all camera settings can be set to your preference.

Select your preferred recording quality, select motion detection sensitivity or constant recording. Recordings can be downloaded and saved to your phone or the optional internal micro memory card. In other words, the features and functions of this *hidden camera* is tantamount to having a security Network Video Recorder without the external recorder as the *AC adapter spy camera* is also the recorder.

Because this *pinhole spy camera* is 240V powered, there's no need for batteries. It's live and online 24/7. Please note this *concealed hidden camera* is designed for a specific purpose and shouldn't be used as a permanent or fixed security camera. Use the camera when needed otherwise disconnect from power when not in use. Check on your babysitter, children, pets, or keep an eye on your office from anywhere in the world. View and listen in to this *AC Adapter WiFi Hidden Security Camera* from just down the street or the other side of the world. It's fundamentally important to understand, whilst the camera is located within your home or office WiFi zone, the authorised user doesn't need to be in a WiFi zone. If you have 3/4G mobile phone reception, that's all you require. Sure, if you have access to another WiFi hot spot, use it if you like it makes no difference.

In the event you can't live watch the camera, activate motion detection recording and the camera will record to the optional micro SD card up to 128GB which is very well concealed. The *AC adapter Hidden Camera* will record all motion events and store those time and date stamped recordings to the internal memory which of course can be removed, and recordings replayed on PC or MAC if desired.

The authorised user (you) may remotely playback those recordings without the need to touch the camera. When the SD card is full it will auto overwrite from the earliest recording date unless the authorised user selects "stop" recording when full. Save any recording which needs to be retained. Otherwise save and download any required recording to your phone and/or delete the recording from the camera so there are plenty of options.

If shopping around for something similar, be very careful as you may well end up with a non-compliant power connection. Non Australian compliant cameras often require an Australian power connection "adapter" of some sort otherwise it simply won't function here. Oh, and good luck with any required international backup and support.

Our Australian AC adapter doesn't require any other power connection however, it is supplied with some international power connectors for use in the U.S. Using power adapters may also result in a lopsided view. Don't muck about, our *WiFi AC adapter HD 1080P Hidden Cam* fits flush and secure into any Australian power point. The camera pinhole lens has a 15 degree slightly upward view so if connected to a low power point, it won't be looking at the floor. The view will be slightly upward and ideal. Failing all of that, if using an extension power board, the camera can be angled in any desired direction.

Can others also see my online spy camera?

It's a question often asked and rightly so. With the *spy cam* connected to a PowerPoint, wait a few minutes and your phone WiFi settings will depict a camera UID. The UID doesn't mention anything about a camera as such or anything hidden. It will simply be a series of letters and number such as TYCD-6573078 which to anyone but you will mean nothing. To others sharing the same WiFi, the UID could be a neighbours WiFi. In any event, should another person see the UID and wonder what it is, clicking on the UID won't do anything. To access the camera, that person must have the same camera App including your WiFi password and the camera password. Without all 3. it's not possible to access the camera or even suspect it is a camera. As mentioned, to anyone else it's nothing more than just a series of random number and letters.

Features and Benefits

- AC Powered - Plugs into any Australian wall outlet for 24/7 streaming
- No Monthly Fees - Never any monthly fees to view or record your video stream
- Expandable - Add up to 20 cameras to view multiple rooms of your home or office
- Easy Installation - No complicated setup or network configuration needed
- Smartphone Viewing - Free iPhone/Android App for live access anywhere
- Password Protected - Your video is encrypted

How does it work?

Unlike other spy cameras, this device is provided with an Australian power connection. Its small, slimline, and extremely covert thus ideal for discreet security surveillance. After downloading our App, connect the WiFi 1080P Power Adapter to

a power point somewhere within wireless range your WiFi router then switch power on. From your mobile phone, touch settings and enable WiFi. Wait a minute for your router to see the new device online. You ought to see now a series of numbers appear on your phone WiFi settings indicating that a new WiFi device has been found.

Once you see the camera UID, follow the prompts to live connect. Only *Hidden Camera Surveillance* customers will receive a more detailed and easier to understand user manual including step by step screenshots. When you see the camera live, this is where it gets interesting. Users will see options to change the admin password, select motion detection or constant recording mode, select 1080P or 720P recording resolution. The authorised user (access can be shared) may also listen in and record audio surrounding the camera, receive motion alerts, locally or remotely playback recordings and so much more.

AC Adapter Hidden Spy Camera requires a standard 110-240V household power point so no need to worry about batteries. A *covert spy camera* such as this is ideal for short to longer term surveillance but please understand it's not a substitute for *CCTV security*. First and foremost, it's a *spy camera* and should be treated as such.

AC power supply adapters are very common and often used for charging various devices so leaving a power supply connected to a power point or a power board, double adapter etc certainly won't look out of place. This makes for a perfectly discreet *covert camera surveillance* device as generally even the most suspicious of partners would not give it a second thought. After all this is real a power adapter not just a spy camera.

2.0 mega pixel COMS Lens

The *AC power supply adapter hidden camera* is brilliant for several reasons. A discreet removeable cover conceals an internal micro SD memory card slot from 16-128GB. Don't be concerned about someone finding it because for all intents and purposes its looks and is quite real. Memory cards are optional and only needed for recording however, if you prefer to live view via WiFi or Internet, a memory card isn't necessarily required.

We normally supply Class 10 or better SD cards from 16-128GB optionally available online. If you supply your own SD card it must be class 10 or better. We don't take responsibility for non-compliant memory cards. This *AC Adapter WiFi spy camera* will record to internal memory (or FTP) when it detects motion and if that motion continues the camera will keep recording until motion ceases.

Specifications

Video Resolution: 2 Megapixel CMOS

Video size 1920 x 1080P

Photo Resolution 4032 x 3024

Record Speed selectable including real time

Wide Dynamic Yes

Viewing angle approx. 90 degrees wide angle and 15 degrees upward

Motion detection distance approx. 6m line of sight
