WIFI ALARM PIR MOTION SENSOR HIDDEN CAMERA

Model Number – WF-PIR

Short Description

Introducing our brand-new *WiFi PIR Alarm Motion Sensor Spy Camera* with **Ultra Long 1 year standby** rechargeable battery. This *covert pinhole hidden spy camera* includes motion activated HD 1080P Video & Audio recording, motion detected mobile phone push alerts, No Glow IR night vision and smart phone full live remote access.

What looks like a typical home of office *burglar alarm motion sensor* is really an amazing *hidden spy camera* that can see and record even in total darkness. Best of all, the all new rechargeable lithium battery can power this *hidden nanny camera* for up to 12 months on one charge. No need to find power or constant recharging. How clever and how good is that !!

Description

This amazing *WiFi Hidden Camera* is easy to use and absolutely packed full of features and functions. This all in one HD pinole security camera with built in tiny microphone is fantastic. What looks like a standard ceiling corner mounted alarm motion sensor is really a powerful and very discreet battery powered *WiFi spy camera*. Of course, it doesn't have to be mounted anywhere for people to see, it could be fully concealed or hidden but the point is, most people have seen motion sensors before so what's unusual about seeing another? As a dummy alarm motion sensor (not a real sensor) if you do have an existing home or office alarm system, keep existing motion sensor/s and just mount this *hidden PIR Spy Camera Motion Sensor* (bracket supplied) in the opposite corner or move it from room to room.

Functions include motion detection recording, HD Video and audio not to mention *invisible IR night vision* including full remote camera access. View this or multi cameras live on your free mobile phone App. Change camera settings, remotely playback video and audio recordings, save any desired recordings direct to your smart phone, watch, listen and record even in total darkness. Listen to audio live or in video playback mode, even receive motion detected push alerts so you know when this *WiFi Hidden Alarm PIR motion sensor camera* is detecting activity.

Please note we do have other DVR 12V powered alarm [PIR Motion sensor DVR cameras](#) although these spy cameras don't have WiFi and the internal battery is smaller, so it needs to plug into power.

The basic difference between the *WiFi & DVR type Alarm motion sensor hidden Camera* is a slight price difference. Our *DVR PIR spy cameras* record upon motion to an internal micro memory card up to 32GB but with no remote access. *DVR Alarm PIR cameras* can perhaps be a little easier to use in the sense that you don't need WiFi or a smart phone to access this spy camera although less features and functions.

Are we ticking all the boxes so far? If power happens to be available and you prefer to use it, no problem it can do that too. However, with an amazing new internal rechargeable Ultra long term lithium battery, users simply have the choice, battery or power and it can do both. Hidden Camera Surveillance also provides it's customers only with a 5V Australian power supply which can both power the camera and/or charge the battery. Hidden Camera Surveillance will also provide an easy to understand user's manual with screenshots. Still not sure, call our office if you need backup and support help and we do offer 12 months product warranty (not including postage). Memory cards are optional and available to purchase online.

1080P HD WiFi AC alarm PIR Hidden Camera with No Glow IR Night Vision is a high resolution colour pinhole camera with audio allowing for live HD video streaming directly to your iPhone or Android smartphone. Home alarm motion sensors devices are common anyway, so this *hidden security camera* won't look out of place anywhere. Who takes any notice of alarm sensors?

Setting up live streaming is easy and takes just a few minutes. Download our free iPhone or Android App and follow the instructions. Simply wait a few minutes for your phone to locate the device UID, select the UID number in WiFi phone settings, select your WiFi network router and WiFi password to be live viewing the camera. Once you see this *spy camera* live and online, all other camera settings can be set to your preference without the need to touch the camera.

Select your preferred recording quality, select motion detection sensitivity or constant recording. Recordings can be downloaded and saved to your phone or to the optional internal micro memory card up to 128GB. In other words, the features and functions of this *hidden camera* is tantamount to having a security Network Video Recorder without the need for an external recorder as this *PIR Motion Detector Covert WiFi Nanny Hidden Spy Camera* is also the recorder.

It's live and online when remotely accessing the camera or recording but at all other times it's in sleep mode thus conserving battery power. Whenever motion is detected, within a few seconds the camera is silently and discreetly recording audio and video and at the same time, authorised users can elect to receive motion push alerts. In other words, a heads up that someone is moving about in the room. It's all part of the package.

Check on your babysitter, children, pets, or keep an eye on your office from anywhere in the world. View and listen in to this WiFi motion sensor Hidden Security Camera from just down the street or the other side of the world. It's fundamentally important to understand, whilst the camera is located within your home or office WiFi zone, the authorised user doesn't need to be in a WiFi zone. If you have 3/4G mobile phone reception, that's all you require. Sure, if you have access to another WiFi hot spot, use it if you like.

This is a rear view of the WiFi PIR alarm motion sensor camera. Note the internal lithium battery, on/off switch, reset button, micro SD card slot and mini USB charge interface.

This is the same rear view of the PIR camera with the battery lid closed. Please note a small mounting bracket is supplied with each camera. Some prefer not to use the bracket and instead prefer double sided Velcro or similar, but the point is, customers have the choice.

In the event you can't live watch the camera, motion detection is auto armed anyway so this hidden camera will record to the optional micro SD card which is very well concealed. It will record all motion events and store those time and date stamped recordings to the internal memory which of course can be removed from the camera and replayed on PC or MAC if desired.

The authorised user (you) may remotely playback those recordings without the need to touch the camera. When the SD card is full it will auto overwrite from the earliest recording date unless the authorised user selects "stop" recording when full. Save any recording which are important and need to be retained. Otherwise download any desired recording to your phone so there are plenty of options.

Can others also see my spy camera online? It's a question often asked and rightly so. With the spy cam powered on, wait a minute and your phone WiFi settings will depict a camera UID. The UID doesn't mention anything about a hidden camera. It will simply be a series of letters and numbers such as TYCD-6573078 which to anyone other than you will mean nothing. To those sharing the WiFi network, the UID could be a neighbours WiFi. In any event, should another person see the UID and wonder what it is, clicking on the UID won't do anything. To access the camera, that person must have the same camera App including your WiFi password and the camera password. Without all 3 it's not possible to access the camera or even suspect.

Features and Benefits

No Monthly Fees - Never any monthly fees to view or record your live video stream
Expandable to multi cameras
Easy Installation - No complicated setup or network configuration needed
Smartphone Viewing - Free iPhone/Android App for live access anywhere
Password Protected - Your video is encrypted

How does it work?

Small and very covert, this hidden camera is ideal for discreet security surveillance. Download our free mobile phone App, switch camera power on somewhere within wireless range of your WiFi router. When you see a series of numbers and letters appear on your phone WiFi settings, the new WiFi device has been found.

Once you see the camera UID, follow the prompts to live connect. As mentioned, *Hidden Camera Surveillance* customers will receive our easy to understand user manual including step by step screenshots. When you see the camera live, this is where it gets interesting. Authorised users will see options to change the camera admin password but also change camera settings as well. The authorised user (access can be shared) may listen in live, record surrounding audio & video, receive motion alerts from anywhere in the world, locally or remotely playback recordings and so much more. Memory cards are optional and only needed for recording however, if you prefer to live view only via WiFi or Internet, a memory card isn't necessarily required.

When ordering online, we normally offer to buy an optional Class 10 or better SD card although you can provide your own. If you supply your own SD card it must be class 10 or better. We take no responsibility for non-compliant memory cards. This *WiFi spy camera* will record to internal memory when it detects motion and if that motion continues, will keep recording. Motion detection is the preferred recording method as its not wasting memory recording nothing and conserves battery power as the camera sleeps when there is no activity.

Specifications

Video Resolution: 2 Megapixel CMOS
WiFi Worldwide Live Streaming video
Motion detection & Push alarm alerts
Video size 1920 x 1080P
Photo Resolution 4032 x 3024
Loop or recycle recording when the SD card is full
