Towing Trailer Suzy Coil Single 10m Cable Connector Kit

Model Number – DIN-T80

Short Description

This is a *Trailer, Truck & Caravan single camera Towing kit with Suzy Coil* designed for our AHD cameras and monitors. This flexible Suzy coil interface cable extend 0.5-4m. It's designed for an easy connect between the trailer and towing vehicle monitor. When selecting AHD (Analogue High Definition) monitors and cameras, ensure the DIN cables are AHD compliant. AHD has a thicker and shielded inner copper core specially designed for our camera systems and trailer coupling.

Description

Ideal for *cars, buses, trucks, forklifts, agricultural vehicles, heavy machinery, tractors, trailers, caravans, semi-trailers, horse floats* and so much more.

1080P AHD is double the resolution of standard 600TVL reversing cameras. High resolution AHD monitors and cameras demand higher quality connection cables. These cables and couplings are waterproof. The 4 inner connecting pins power the cameras whilst video and audio it transmitted through the same lead.

The DIN-T90 supports 1 camera and included with kit is 1 x 20m plus 1 x 10m DIN cable. One cable connects to your monitor and the other cable to the camera, and both are interfaced with the trailer coupling.

This trailer connection kit is primarily designed for easy connection from the AHD camera to the monitor interfaced but at the same time easily disconnected when the trailer is no longer required.

Wireless Camera Systems

Our Wireless cameras and monitors don't require DIN cables or a coupling interface which is another option to consider. However, each wireless camera must be connected to vehicle 12V power. Cabled *CCTV mobile cameras* of course are far less vulnerable to wireless transmission interference.

Specifications

Coiled Cable length 1m

1 x 10m AHD 4 PIN Cable connector

1 x 20m AHD 4 PIN Cable connector

Heavy Duty truck to trailer easy release waterproof connections
