PEEPHOLE SMART DOOR VIEWER MOTION VIDEO RECORDER

Model Number – DOOR-VIEW-REC

Short Description

Most of us are familiar with the old *peep hole door viewer*. Not a bad idea for its time but haven't we come a long way since. If you already have a peephole viewer but would like something better, look no further. Hidden Camera Surveillance is now offering the all new battery powered LCD monitor *Peephole Smart Door Viewer with 1080P Motion Video Recorder*. Should anyone stand at your front door for more than a few seconds, the camera will record time & date stamped hi resolution video and audio to a concealed micro SD memory card inside the monitor.

See and talk to anyone on the door outer but at the same time record if you choose to. If someone known or unknown is harassing you, bashing on your door at all hours, leaving mess or rubbish at your door, vandalising, cursing and so on, you need to obtain proof who this person is, what they are doing or saying and providing that recorded evidence top police or body corporate etc.

Description

Removing an old peephole may leave an unsightly hole in the door however with our new *Video Doorbell* this new *Peephole Smart Door Viewer* slips into the existing door *peep-hole*. Easy enough for anyone slightly handy as it only requires a few screws to complete the installation within minutes. Otherwise drill a camera door chime hole through the existing door and the LCD colour monitor is mounted to the camera bracket on the door inside. Easy to follow instructions are provided and remember, it's all battery powered.

Pictured below are the 2 *Peephole Smart Door Viewer with 1080P Motion Video Recorder* colour versions black & bronze.

As mentioned previously, peephole devices otherwise referred to as a *peekhole*, *spyhole*, *doorhole*, *magic mirror*, *doorbell camera* or *door viewer* etc all served a purpose, although none of those match our new *Door Camera & Motion Recorder*. The trouble with the old technology is when someone comes knocking on the outside and you look through the old peephole to see out, the person on the outside will see the peephole light become blocked so that person instantly becomes aware the premises is occupied.

Another device available anywhere is called a “*reverse peephole viewer*”. The reverse peephole viewer is simple – just place the viewer up to any standard peephole and the viewer will reverse the view, allowing anyone to see through the old peephole to the other side. This tiny device is the opposite to a peephole where the person outside can look through your door peephole without your knowledge to see who maybe INSIDE the house or apartment. That’s not possible with our *LCD door camera monitor and recorder*. It’s frightening yes but it happens regularly. If you don’t know the person on the other side, be cautious opening that door as home invasion is all too common.

Our all new and amazing colour *Doorbell Camera* is outstanding. It’s all very well to have a basic camera and monitor but what’s the point, you want the option to record any unknown person on the outside. Remember the identity you capture could be crucial to police for criminal ID.

If someone presses the *door chime* or stands at your front door for more than a few seconds, our *Digital Door Camera Viewer* will capture time and date stamped pictures or video with audio day or night and save those recordings to a built in micro memory card up to 32GB. However, let’s say someone approached the front door to listen for any internal noise. The monitor will auto illuminate so you can instantly see, even from a distance, someone is at the door and its recording.

Who knows what their intentions may be however, that unknown person didn’t even touch the camera door chime? To the uninvited person on the door outer (smart as he/she thinks they might be) they will have been photographed or video recorded anyway as the camera is movement activated. This rather *smart door cam* will silently and discreetly video and audio record regardless. It’s brilliant and an amazing yet inexpensive essential security tool.

To playback captured video or still picture recordings, do so directly from the large 10cm colour LCD monitor. Otherwise, remove the camera memory card to replay and save recordings to PC. The *Peephole Smart Door Viewer* is also ideal for when you are NOT at home. The camera will retain a record of who knocked or lingered at the door during your absence. It could be a courier driver, perhaps a friend or neighbour or someone potentially casing the area. The built in IR even allows for the tiny camera to discreetly record even in total darkness.

How does it work?

This is our all new and latest design *Digital Door Viewer Recorder* with mini camera and a large 4.1” (10cm) colour LCD monitor. A *peephole camera* is a small nice looking alloy digital video camera designed to fit into your home or apartment new or existing *door peephole*. It provides much better wide angle view compared to an old style peephole lens and includes IR night vision all connected to a battery powered LCD 1080P HD colour display. The screen features a setup menu to enabling you to clearly see who is on the other side but also two-way talk to that person through a mini speaker and

microphone. Push button instant recording is available if desired and be secure in the knowledge that the door won't be opened to a stranger. Great for kids at home too.

What size or thickness should my door be?

Between 35-105mm is ideal

What camera & Monitor colours are available?

Currently the system is available in Black or Bronze as pictured. The camera housing is alloy so it's quite strong and robust whereas the monitor is a lightweight plastic type casing with an LCD colour screen. The internal battery is rechargeable lithium, and we provide a 5V USB charger with each camera.

How long will the battery last before it requires a recharge?

Generally, about 3-6 months depending on how often the camera is used and recording.

Is the camera wide angle?

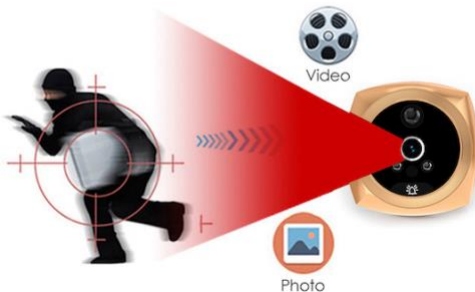

Yes 135 degrees so wide angle viewing.

What about the recording quality?

High res 1080P HD or 720P with noise cancelling audio included.

PIR motion detection

Automatic photo/video

Tell me more

The mini colour pinhole day night camera really doesn't look like a camera at all but make no mistake, it's packed full of features. Users can easily change settings from the monitor at any time. If you don't want the camera to record on motion, switch the feature off. If you don't need the IR then switch off too as it only takes a moment and that's the beauty of it all, arm and disarm functions and features as you please.

4.1 inch Smart Video Doorbell

- 1080P HD Video
- Two-way Audio
- No Wi-Fi
- Night Vision
- PIR Motion Detection
- 135° Wide-angle Camera Lens
- Battery powered
- Real-Time Video

As mentioned previously, to the elderly or children, those alone at home etc, it's not really a good idea to open a door when you DON'T know who is on the other side. When a person on the outside presses the chime, the LCD will auto switch on. That means that those indoors can clearly see who is on the other side without pressing an eye up to a peephole. This model features a high-resolution 4.1" colour LCD monitor so even from a distance, there is no mistake and at least you know whether it's safe enough.

4.1 inch Screen Video Doorbell

This is a professional *Door viewer and Chime Digital Motion Detection Recorder*, all in one compact and impressive unit.

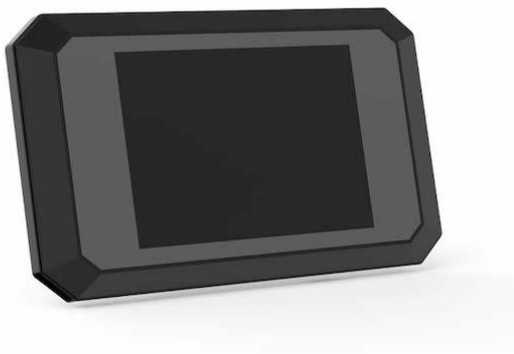

Specifications

- LCD Screen Doorbell Smart Home Peephole Video Chime Camera Doorbell
- Screen size - 4.1 inch (Display Screen)

- On screen languages include English, French, German, Italian and more.
- 4 x ringtones with volume adjustment
- LCD 10.4cm (4.1")
- Resolution 1080P or 720P selectable
- Recording time selectable
- Motion Detection Recording

How easy is it to install this door chime kit?

In most instances just a few minutes, especially if this camera kit is replacing a standard peephole. Otherwise drill a hole through the door between 16-40mm diameter. The camera fixes to the outer door hole and the connection cable passes through the door hole and interfaces with the back of the monitor. No wiring is required it's basically a plugin connection.

A small steel mounting bracket is supplied with the kit so it must be attached to the back of the door on the other side of the door hole. Once the bracket is fixed in position, the LCD monitor slides onto the bracket. Job done. No need for professional installation it's easy enough for anyone even remotely handy. A diagram is provided with each kit anyway.

This is a side view of the LCD monitor.

This is a rear view of the same monitor.

This side view depicts the mini USB battery charging interface. We supply the lead and charger no extra cost.

Wide angle with large viewing

135 degree wide angle with large viewing to protect security home.

Adapted door thickness: 35-105mm
Support door hole diameter: 16-40mm

(Note: The size is manually measured, and an error of 1-3mm is normal)

Peephole Door Viewing installation guide.

packing list

Easy product installation

1. Choose the right screw and screw it to the screw hole of the camera.
2. Put the camera into the cat-eye hole on the door, and pass the screws and cables through the cat-eye hole on the door first.

3. Tear off the paper on the adhesive of the mounting plate, install the fixed steel plate.
4. The connector on the cable is buckled with the main machine.

5. Align the display of the main unit with the mounting plate and press it lightly to get stuck.

The centred camera is surrounded by night vision illuminators and the door chime is pictured at the base of the camera.
