**WiFi & DVR 4K CAR KEYCHAIN HIDDEN CAMERA**

Model Number – wf-dvr-key

**Short Description**

WiFi 4K DVR Car Keychain Hidden Camera is available to order online or call our office. Most debit/credit cards accepted including discreet overnight express post-delivery. Ideal *nanny cam*, *handheld spy camera* or *miniature body worn camera*. This new *miniature WiFi & DVR Super HD spy camera* is amazing.

Hidden Camera Surveillance *WiFi 1080P Spy CarKey remote control* looks like any other but it's a "dummy" remote concealing a built in Ultra HD 4K colour *pinhole camera* with audio and real time live recording up to an amazing 120 FPS so in terms of quality, it surpasses most other security cameras 5 times the size.

**Description**

Pictured below is our latest mini hidden camera *car-key* or *keychain remote control spy camera*. It will record for 90 minutes on just one charge but if you happen to connect it to power (Australian 5V power supply will be included) or a portable power bank, the recording potential isn't battery dependant as such.

All camera functions are controlled directly through the smart phone App via local P2P settings. This *miniature hidden camera* creates a WiFi hotspot so users can see the camera live on their mobile phone. Record video and audio directly to your phone or allow the concealed micro SD memory card to record and playback later.

Please note this camera does not support 4G or remote WiFi access. In other words, this *spy camera* isn't connected to your WiFi router but rather P2P or local WiFi only, similar to Bluetooth. The authorised user must be within a certain range of the *4K DVR Car Keychain Hidden Camera*.

What makes this *hidden security spy camera* different from others? If someone suspicious were to pick up this *dummy car remote control camera* and closely examine it, there's no reason to suspect it's anything other than a genuine car remote.

To make the *WiFi DVR HD Spy CarKey Remote Control Camera* even more discreet, attach a bunch of keys to it. It even comes with a bottle opener and a removeable belt clip. Otherwise, handhold the camera to push button record on/off or simply lay the keys on a bench or table

to continuously record audio and video to the concealed optional internal micro-SD memory card anywhere from 16GB to 128GB capacity. However, users may also record directly to phone memory if preferred.

Everyone carries car keys so what could be better? It's important from a customer's point of view not to become paranoid about it. You know what it is but no one else will.

### **Typical Scenario**

Let's assume you have a discussion with a person and that person is lying or abusive in some way. From an evidence point of view, who said or did what could be important. Perhaps an ex-spouse, employer, or employee, DVO breach, someone stealing etc, the reasons are endless.

The fact is, you need video and/or audio evidence proof and this could be just the key. The concealed audio and video recording is genuine with an exact watermarked time and date stamp. The *key-chain spy camera* automatically takes the time and date from your smart phone with no need to manually set it.

There are various means of recording and just to explain, the camera is the recorder. Concealed within the *dummy CarKey spy camera* is a micro-SD Class 10 memory card up to 128GB. It's a simple on/off recording button or use the App and see what the camera can see on your phone.

The great thing about this camera is you that don't need to be in a WiFi zone to record. For instance, you may be sitting on a park bench where no WiFi is available. However, the camera can still wirelessly communicate with your mobile phone in local P2P mode. Similar in some ways to Bluetooth but in this instance called local WiFi. That means you have live control over the *hidden spy camera* directly from your mobile phone. Whilst the optional SD memory card is concealed within the camera casing, you could in effect record directly to your phone memory thus bypassing the SD card.

When in use the camera has a power battery capacity of around 1 to 1.5 hours. However, it can be connected to 5V power for a more permanent use. Connecting to power will also charge the battery. Please note this is NOT a CCTV camera and therefore shouldn't be left unattended and powered indefinitely. If you require longer term recording, a USB Power Bank will do the job as the battery is larger or connect to our included 5V USB power supply.

Obviously, one would not hand hold the camera when connected to power, it would look silly however, the *CarKey hidden camera* is so small it's very easy to power and hide.

### What happens when the SD card is full?

This dummy Car keychain spy camera app allows the user to select recycle recording when full but there is an App alert when the card is getting close to full. If you have any concerns that the camera may overwrite an important event recording, then back up to phone or PC memory. MAC also supported.

### How fast will it use my SD card memory when recording?

There are several factors to take into consideration including the desired resolution as this camera can record in 4K Ultra HD. If set to the highest resolution using our optional 128GB micro Class 10 or better memory card, expect the card to be nearing full in 6 hours of constant recording.

Remember with a wide variety of recording options, should you select a lower HD1080P record setting, then expect around 12 hours of constant recording. Similarly, if set to the lower 720P quality, again this would effectively double or quadruple the recording duration. 720P is still very high quality so you won't be disappointed either way.

Our keychain spy camera with a built-in WIFI 4K UltraHD looks like any other key fob. It's small enough to be pocket carried or clipped to your car keys or belt.

The WIFI 4K Ultra HD hidden car keychain camera has instant recording without raising any suspicion. The built-in Sony IMX179 4K 8.0 Megapixel sensor captures extremely clear video with audio. It also captures remarkable detail from a distance, even when compared to other security cameras five times the size. The video frame rate can be set to a massive 120 frames per second (FPS). This high speed recording delivers incredibly smooth playback with less blur including stabilization when recording action.

Built-in WIFI allows for live video and audio streaming directly to your smartphone or tablet provided it's within a 10m range and depending on obstacles between the camera and phone. With our free app, you can start, stop, and/or download directly to your smartphone or tablet. Share videos instantly to social media.

At the press of a button, record video instantly through the app or to key-chain memory. Audio can be set to on or off in video mode, audio recording mode only or photo mode only all from the key fob or the app. Photo quality as high as 30 Megapixel which is outstanding. Video playback is easy too. Just connect to a USB port on your PC or Mac or connect over WIFI to your smartphone or tablet. Sharing, playback, and saving videos is easy.

## Specifications

Supports local WiFi only  
Resolution: 3840 x 2160 Live Streaming  
Constant Audio and Video Recording to SD card or phone memory  
Selectable Photo Mode – 30MP, 20MP, 14MP, 10MP, 7MP, 5MP or 4MP  
Built in lithium rechargeable battery  
Operational time 90 minutes per charge  
Can be 5V powered for long term recording  
Video Format: AVI  
Supports up to 128GB Class 10 micro SD (stores up to 6hrs Video at UHD setting)  
Selectable Resolution 4K Ultra HD, 2.7K SHD, 1080P, 720P  
Free Smartphone App  
Night Vision – No but 1 Lux clear video even in low light conditions  
Frame: 25fps to 120fps Real time ultra-clear HD  
Audio: Pinhole Microphone built in and in-sync with video  
Visual Angle: 72 degrees  
Rechargeable lithium battery  
Compressed Format: H.264  
Maximum memory capacity: Micro SD Card up to 128GB  
Player Software: VLCPlayer/SMPlayer, Windows Media Player etc.  
Computer Operating System: Windows/Mac OS X  
Mobile Phone Operating System: Android/iOS  
Web browser: IE7 and above, Chrome, Firefox, Safari etc  
1 year manufacturer warranty  
Built in pinhole lens  
4K Super HD Resolution  
Quick recording

## Suggested use

**Personal Protection** – Hold the *Keychain body Camera* in your hand, pocket, or purse, and instantly capture the video evidence you need with the push of a button.

**Being Harassed or abused** - If you're dealing with harassment from neighbours, co-workers, family, or others, our *4K Ultra HD hidden car keychain camera* is a handy and reliable means to obtain that needed proof.

**Job Interviews** - Record your interview to improve interviewing skills.

**Home Movies** – Kids can be camera shy when they know they’re being recorded so record them naturally but secretly and capture precious unaware moments.

**Delivery Proof** - If you deliver goods or food for a living, it’s a sure way to prevent discrepancy by quickly recording every delivery including a time and date stamp for authenticity.

**Spy security cameras** are commonly designed to discreetly monitor a specific zone. You may wish to keep an eye on valued goods and belongings. Is the cleaner suspected of being potentially being light fingered? It may be that you have a co-worker or nanny suspected of stealing. Perhaps when a child is being minded, it’s peace of mind if nothing else, know the child is being well treated.

The reasons for needing a hidden camera are endless but the point is, even if this device doesn’t suit your needs, we do have a range of other [WiFi Spy Cameras](#) which work in a similar fashion but look completely different.

Hidden Camera Surveillance even has [DIY Hidden Cameras](#) that can be hidden in everyday home items of your choice. If you feel that introducing something new into the home or office could potentially arouse suspicion, our [DIY WiFi or DVR spy cameras](#) could be the answer as YOU then hide the camera inside a device of your choice.

### What’s the difference between a WiFi & DVR Hidden Camera?

There is a fundamental difference between this [Car-Key HD WiFi Spy Camera](#) and a similar albeit cheaper [DVR Car-Key spy camera](#)

HCS offers both camera options but to briefly explain, a DVR hidden camera is armed and disarmed with the push of a button. Users will normally feel a short vibration on and a double short vibration off. This enables the camera to be switched on/off and stop/start recording by simply pressing a button whilst being handheld. A DVR hidden camera on the other hand doesn’t support remote access to a phone and that’s the main difference.

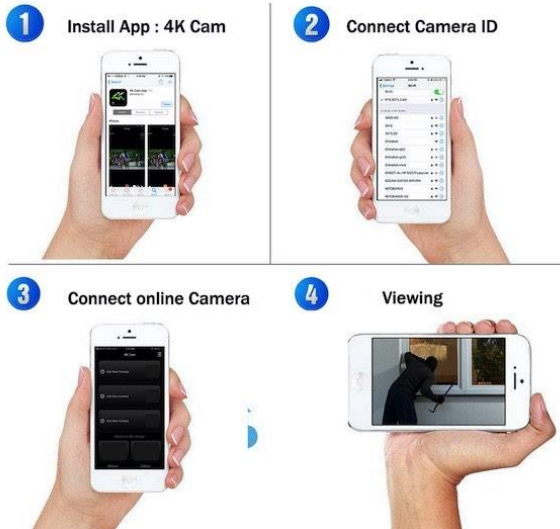

The [DVR Carkey Spy Camera](#) looks similar however, to view or playback recordings it’s necessary to remove the SD card concealed within the camera (or connect a USB lead to PC or MAC) and replay those video clips. Both the DVR and WiFi versions of this spy camera can be powered for long term recording, but the WiFi version supports a much higher 4K higher resolution with various recording speeds up to 120FPS. A [DVR hidden camera](#) on the other hand is cheaper and perhaps easier to use.

This *WiFi carkey hidden spy camera* requires the user to download our free App which supports both IOS & Android. Users have the option to select their desired recording quality whereas similar *DVR CarKey Spy Camera* will normally have a fixed resolution with not as many recording options.

**How many cameras does the App Support?**

The App supports 3 cameras simultaneously.

**EASY TO SETUP WIFI MODE**

**Tell me more**

In local live P2P or WiFi mode, the authorised user will see live phone to camera video from their smart phone app. In other words, see and hear what the camera can see and hear. Push the phone record button to record or use the internal SD memory card instead.

With 4K technology, things like rapid movement blurring and out of focus scenes due to movement are a thing of the past. 4K and high speed 120FPS (Frames Per Second) make this camera exceptional with resolution totally selectable. On the go means this miniature and impressive body camera or Rapidly Deployable Surveillance Kit (RDSK) is a must have for investigators.

**Other than me can anyone else see my camera?**

It's a question often asked and rightly so. In short, the answer is no. When entering a shop, home, or office, often your phone will depict a range of wireless routers. Other than your personal router, all others are private and can't be accessed for security reasons hence the password access. The same applies to this *covert camera*. Only you have the App and password so to any prying eye, no not possible.
