WIFI WIRELESS OUTDOOR MOTION DETECTION SECURITY CAMERA

Model Number – WF-VICO-CAM

Short Description

This new professional *outdoor motion sensor security camera* is simply outstanding. Suitable for indoor or outdoor use, this 1080P HD *surveillance security camera* is not like any other so please don't be sucked into paying monthly or annual fees. This *WiFi wireless motion activated security camera* is so easy to setup and install. We provide the mounting bracket, 5V USB battery charger and the rechargeable lithium battery. No need for cabling or power and setup is easy as downloading a smart phone App.

Battery powered for up to 6 months or more on one charge, that's rather impressive however, did we mention two way audio, motion detection HD video recording, IR or white LED night vision, up to 128GB micro SD card recording, option to receive phone motion push alerts, motion audio camera warning, share with friends, family or colleagues and so on.

Description

This amazing new *WiFi Battery Surveillance Camera* is easy to use and packed with features and functions. All in one security camera with a two way microphone and speaker, quite handy if you need to talk to someone at the camera or warn that person that he she is being recorded. Remote Cloud recording is also App available if preferred.

This 1080P night vision security camera can be mounted anywhere even upside down if you choose. Functions include motion detection recording, SD and/or cloud recording plus IR or white LED night vision. You control the camera functions from your smart phone App and select preferred B/W IR night vision or white adjustable LED vision for colour recording by night. IR is perhaps more discreet but LED serves two purposes. Other than recording in colour, should an intruder suddenly have a bright light plus a camera speaker audio warning, the games is up pal, time to get out of there.

This 1080P Smart Battery Camera has an easy to setup and install. Ideal for any purpose provided the camera is mounted within range of your home or office WiFi network. The camera App also supports multi cameras and sharing. Please note your router must be set to 2.4Ghz as most WiFi security cameras do not function on the 5Ghz frequency.

If the security camera becomes disconnected from the WiFi network or reception drops out, it will still record but you won't have remote phone access until WiFi is restored. It just means at some point you would need to remove the optional concealed camera SD card and replay the stored audio and video recordings on PC USB. No software required as VLC or Windows media Player both support AVI files.

Powered by an internal and rechargeable lithium battery (Hidden Camera surveillance will provide a 5V USB charger at no extra cost) the camera battery can function for up to 6 months on just one charge anyway. The smart phone App will display smart camera battery level when logged in.

Each camera has a PIR motion sensor built in which can sense motion up to 10m away. This triggers the *Smart WiFi Camera* to video and audio record and send a push alert to your phone if desired. Once you receive the push alert with a picture attached, touch the alert to instantly playback the recording from anywhere in the world.

Motion detection means the camera is in sleep mode when not recording or sensing motion, but the sensor is always on guard looking for motion to trigger an instant wakeup. Motion detection extends battery power so the more often the camera is recording or remotely accessed, the faster it consumes battery power. That's not to say it can't be plugged into power. If power is handy at the camera location, use our Australian 5V USB power supply with no need to recharge at all.

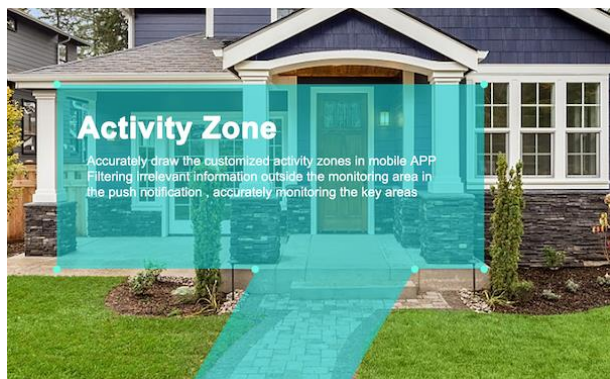

What happens when the memory card is full?

When the card is full and it will take some time, auto recycle kicks in and that means recordings will commence over writing from the earliest recording date. In this regard after some time the card is always full, but you could potentially have months of stored recordings at any one time. In those times where an incident was recorded and needs to be saved, the authorised user may look at the recording and save as many recording events as you like, directly to mobile phone memory or PC HDD.

How high should I mount the WiFi battery security camera?

Ideally between 2 to 3.5m but it's fundamentally important to tilt the camera bracket down a little so the camera has a point of ground reference rather than aimed at the horizon with no point of reference. The PIR motion sensor has various sensitivity however, the camera can detect motion up to approximately 10m depending on the size of the person or object. Try not to aim the camera directly at a bright light and where possible avoid moving tree and shrub branches.

Is this WiFi outdoor battery powered security camera available with a Solar Panel?

Whilst the internal batteries are quite powerful and can keep the camera fully functional for 6-12 months on just one battery charge, yes is available with an "optional" solar power but by order only. Please call our office for more information if needed.

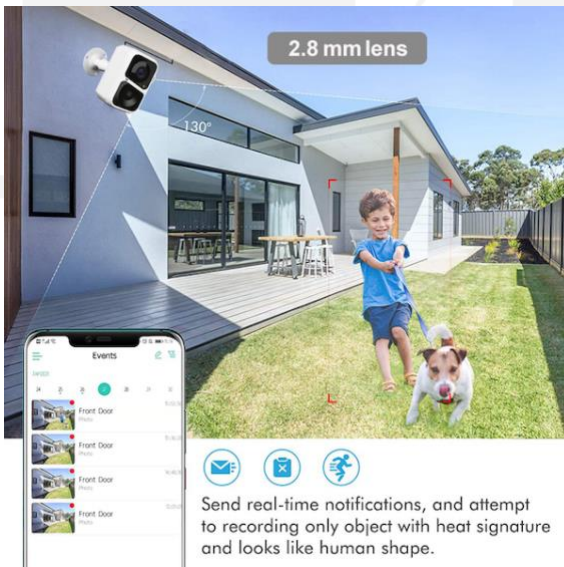

Hidden Camera Surveillance 1080P Wireless Security Camera features an extremely long battery life with pre-installed powerful Lithium batteries lasting up to 6 months on a single charge. The wide angle 110 degree field of view covers a broad area. After charging, your security camera will be live and online within minutes. Easy non-professional installation & no cables needed. See in the dark with powerful infrared night vision which automatically activates by night. Unlike others with poor quality and useless functions, our wireless motion detection security camera & recorder supports both IR and bright white LED not to mention much larger recording capacity up to 128GB. Users may select their preferred motion activated night vision option, IR or LED. It's brilliant and it works.

Features

- 100% Wireless rechargeable lithium battery up to 6 months based on average 10 x 30 second recordings per day and how many times the camera is remotely accessed for live viewing
- Crystal clear HD video day or night
- Easy Setup
- No monthly or annual fees
- Weatherproof
- Designed to function in any environment all year round
- People & cars trigger recording with push notifications
- 2-Way noise cancellation Audio to greet guests or warn intruders
- Voice Audio Control
- 32 to 128 GB Micro SD card & optional Cloud backup.
- Compression H.264/H265
- 2.0 Megapixel 1920 x 1080P HD Selectable
- CMOS 1/2" Sensor
- Supports WiFi 2.4Ghz frequency (not 5Ghz)
- TCP/IP, UDP/IP, DHCP, RTMP, MUTP
- Dynamic IP addressing supported
- Micro SD card up to 128GB Class 10 or better
- Supports Iphone & Android
- Weight 250g
- Dimensions 97 x 72 x 63mm
- Viewing angle 110 degrees 3.6mm lens
